

Space

Lightweight and high reliability

Edition 2021

**Lightweight and
high reliability**

About HUBER+SUHNER

HUBER+SUHNER is a global company with headquarters in Switzerland which develops and manufactures components and system solutions for electrical and optical connectivity.

With cables, connectors and systems – developed from the three core technologies of radio frequency, fiber optics and low frequency – the company serves customers in the communication, transportation and industrial sectors. Our products deliver high performance, quality, reliability and long life – even under harsh environment conditions. Our global production network, combined with group companies and agencies in over 80 countries, puts HUBER+SUHNER close to its customers.

Excellence in Connectivity Solutions

Developing the world of Space

Connectivity solutions in the field of satellite communication need to be developed for the harshest environments. For over 25 years, HUBER+SUHNER has been designing and manufacturing state-of-the-art microwave components offering outstanding electrical and mechanical performance.

Globally networked

HUBER+SUHNER products deliver high performance, quality, reliability and long life – even under the toughest conditions. Our global production network, combined with group companies and agencies in over 60 countries, puts us right around the corner from our customers, wherever they may be.

Your partner for system solutions

HUBER+SUHNER is a leading international manufacturer and supplier of components and systems for electrical and optical connectivity. We unite technical and manufacturing expertise in radio frequency, fiber optics and low and high voltage technologies and offer a high quality product range for the space market.

Future proof investment

Rapidly growing demand in the satellite communication requires the integration of innovative high performance solutions. RF components from HUBER+SUHNER take this circumstance into account. Our solutions and components meet our customers current and future requirements for all applications in the Satcom, Spaceflight and Ground testing markets, regardless the technology deployed.

Wide portfolio of in-house capabilities

HUBER+SUHNER possesses the in-house capability to perform thermal cycling, real-time X-ray inspection, and XRF materials analysis as services to our customers. Our manufacturing capabilities incorporate IPC, NASA and ESA workmanship standards, clean room manufacturing and testing (class 100 and 10 000) as well as technical training and certification programmes.

Swiss precision delivered worldwide

HUBER+SUHNER is a Swiss company which prides itself in honesty, fairness and social responsibility. Furthermore, HUBER+SUHNER embodies the values traditionally associated with Swiss engineering excellence – those of quality, precision, reliability and high-performance. Even though the needs of a global market cannot be fulfilled from a single location, those values best associated with Switzerland are embedded globally.

Space flight – RF interconnect solutions

Since the turn of the century, our passive microwave products have been successfully employed in various commercial and scientific research projects in the Space market. HUBER+SUHNER's spaceflight heritage ranges from Low Earth Orbit (LEO), Medium-Earth-Orbit (MEO), Geo-Synchronous Orbit (GSO), and interplanetary applications, spanning both manned and unmanned missions. The HUBER+SUHNER quality system is certified by the Swiss Association for Quality Assurance Certificates (SQS, based on ISO 9001, EN 9100, and ISO 14001) and the National Quality Assurance (NQA, based on AS 9100) and governs all business activities throughout the organization.

Connectivity solutions in the field of satellite communication need to be developed for the harshest environments. For over 25 years, HUBER+SUHNER AG has been designing and manufacturing state-of-the-art microwave components offering outstanding electrical and mechanical performance. Our carefully balanced portfolio of passive components offers proven solutions for satellite communication up to 110 GHz. We offer a full range of component materials and ruggedizations as well as patented, leading-edge connector termination methods that ensure reliable performance of our products in even the most extreme environments.

High performance assemblies

The light-weight, low-loss SUCOFLEX 300 series of microwave cable assemblies offer consistent outstanding mechanical and electrical performance, stability and reliability up to 40 GHz. Offering weight reduction of up to 40 % compared to our conventional products, SUCOFLEX 300 cable assemblies are produced in a clean room environment (class 100).

High radiation resistance

HUBER+SUHNER extends the RF cable assembly portfolio with five-shielded cable assemblies for high radiation space applications. The minibend HBR offers a frequency range up to 65 GHz and industry leading 200 MRad radiation resistance.

High power solutions

The PSM (Power Sub Miniature) interface meets the increasing demand for cost effective, low weight and power sensitive aerospace applications. The PSM connector system enables customers to maximize connector density and minimize overall system weight.

Phase shifters and hermetic adaptors

HUBER+SUHNER offers a wide array of hermetic feed-thru style adaptors and phase shifters that offer both in-series and between-series interface solutions for space flight and TVAC testing applications. The hermeticity is provided by a glass fired seal within the adaptor body. The glass material is selected to provide the best electrical performance while also matching the coefficient of thermal expansion of the surrounding body and contact as closely as possible to prevent any loss of hermeticity. All hermetic adaptors are 100 % tested for hermeticity in accordance with ASTM E-498, MIL-STD-202, and MIL-STD-883.

High power cable assemblies

The 32071 cable assemblies are optimised for extremely high power handling applications. The dielectric core construction provides uncompromising mechanical strength and durability along with a high velocity of propagation. These cable assemblies are ideal solutions for high power space flight and TVAC testing applications.

Space flight – high density solutions

HUBER+SUHNER provides complete project management of customer/industry screening and qualification test plans, test profiles, and report compilation. This includes the utilisation and sourcing of Qualified Testing Suppliers List (QTSL) laboratories and the definition of DPA procedures and testing for custom hybrid components outside of the scope of MIL-STD-1580. Sourcing, traceability and assembly processes are performed according to ESA, NASA and MIL standards. Our extensive manufacturing, quality control, and quality assurance capabilities exist to continuously provide our customers with product of the highest quality and reliability for their demanding space flight applications.

High density RF connectors

High density, multi-coaxial connector solutions combine small size and light weight MIL-standard SMPM interfaces with the reliability of threaded and keyed harnesses.

Minibend series

Minibend is a truly flexible, solderless coaxial cable assembly designed for use in low profile, internal, point-to-point interconnections between RF modules within communications systems. Minibend replaces 0.047, 0.086 and 0.141 inch custom semi-rigid cables with standard flexible cables, eliminating the need for predefined custom lengths and bend configurations.

SMPM/SMP

HUBER+SUHNER SMPM/SMP connectors offer reliable instead of unrivaled miniaturization and performance for RF applications up to 65 GHz. SMPM/SMP connectors are MIL-SPEC qualified for defense and space flight applications. Along with the unique bend-to-the-end microbend style cable connectors, HUBER+SUHNER offers a large portfolio of different PCB mount SMPM/SMP connectors that have been designed with optimized PCB trace launch geometries to offer a complete interconnect design solution from "wire-to-trace".

SMPM-T

The SMPM-T is the smallest threaded open source connector on the market. Its unique and innovative combination of a MIL-STD-348 SMPM female interface connector together with a retractable threaded nut provides an integrated solution offering unprecedented electrical and mechanical performance. The SMPM-T handles high density requirements with a connector centerline-to-centerline spacing of just 5 mm (0.20 in) while offering unmatched electrical stability at frequencies up to 65 GHz in even the harshest operating environments.

CT product family

The HUBER+SUHNER CT product family is developed for phase critical applications requiring precision electrical length connectivity. Innovative cable manufacturing technology creates a stable and reliable interconnect solution to satisfy a huge range of customer applications where phase stability is key. These products provide industry leading phase vs. temperature performance, as well as a unique range of cable constructions to fulfill any customer demands.

Ground testing – TVAC and high power testing

HUBER+SUHNER has emerged as a trusted partner in the Space market for passive microwave components that can be used for satellite testing in clean rooms as well as in a thermal vacuum environment. These components support satellites throughout the entire trial period prior to launch.

Our comprehensive product range is optimally matched to the needs of Space customers and serves as a „one-stop shop“ to simplify the procurement process for low and high power applications. HUBER+SUHNER offers an extensive range of TVAC components, from hermetic adaptors for vacuum chambers, to test cable assemblies for clean rooms, and RF over Fiber connectivity solutions to minimize losses for longer cable runs.

TVAC assemblies

Assemblies used within the vacuum chamber must meet ECSS-Q-ST-70-02 C and NASA reference publication 1124 outgassing standards to prevent contamination of the chamber or equipment by solvents evaporating from certain materials. To prevent internal stresses within the cable assemblies and to ensure an extended service life, HUBER+SUHNER TVAC connectors contain venting holes that allow an unimpeded flow of air into and out of the components during pressurisation/depressurisation cycles.

High power solutions

The 32071 cable from HUBER+SUHNER is optimised for extremely high power handling applications. The dielectric core construction provides uncompromising mechanical strength and durability along with a high velocity of propagation. These cable assemblies are ideal solutions for high power TVAC testing applications.

Microwave cable assemblies

A unique cable and connector design enable SUCOFLEX® 500 test assemblies to deliver best-in-class phase & amplitude stability and outstanding return & insertion loss up to 50 GHz. 70 GHz option coming soon!

Phase shifters and hermetic adaptors

HUBER+SUHNER offers a wide array of hermetic feed-thru style adaptors and phase shifters that offer both in-series and between-series interface solutions for TVAC testing applications. The hermeticity is provided by a glass fired seal within the adaptor body. The glass material is selected to provide the best electrical performance while also matching the coefficient of thermal expansion of the surrounding body and contact as closely as possible to prevent any loss of hermeticity. All hermetic adaptors are 100 % tested for hermeticity in accordance with ASTM E-498, MIL-STD-202, and MIL-STD-883.

RF-over-Fiber

With customers requiring that new solutions and systems combine various technologies, HUBER+SUHNER is able to provide our customers with end-to-end hybrid technology solutions. The RF-over-Fiber series enables the use of radio frequency and fiber optics in a single system. Application support is available for tailored solutions.

RF-over-Fiber
LAN-over-Fiber

GPS-over-Fiber (L1 and L2)

Ground testing – Laboratory testing

Every research and development, test, or quality assurance department that works with RF signals requires precise and repeatable measurements. Since the quality of a test configuration is only as strong as the weakest link, HUBER+SUHNER offers a wide range of superior flexible and rugged cable assemblies with excellent amplitude and phase stability and high-precision connectors. In addition, we have a full portfolio of adaptors, resistive terminations and attenuators. Reliable cable assembly and resistive solutions guarantee reduced equipment downtime.

SUCOFLEX® 500

When it comes to test and measurement, SUCOFLEX 500 assemblies guarantee the highest level of satisfaction:

- Torque, crush and kink resistant
- Precise and repeatable measurements
- Long service life
- Reduction of total cost of test with durable, reliable performance

SUCOFLEX® 100

The SUCOFLEX 100 series of flexible microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series provides optimal performance up to 50 GHz, where stringent electrical requirements – in particular, stability and low loss – are important. The assemblies maintain stable electrical characteristics when exposed to bending and temperature.

Sucotest – the highest standard of measurement

Sucotest is ideal for daily use in component and assembly shops, test labs and high speed digital testing applications up to 40 GHz. Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

- Low insertion loss
- Exceptional loss stability
- Excellent return loss

Precision adaptors

HUBER+SUHNER manufactures a wide range of standard and high-performance adaptors that are ideal for lab and production test applications where measurement accuracy, repeatability, and optimum electrical performance are critical.

- Precision interfaces
- Excellent electrical performance
- Premium base materials and platings

Attenuators, terminations and DC blocks

The comprehensive range of high-quality radio frequency attenuators, terminations, and DC blocks is based around the varying needs of test and measurement applications.

Ground communication

The ground segments of satellite communication systems employ a variety of network configurations that provide and manage services delivered to end-users. The broad spectrum of ground station communication typologies are quite similar to installations found in contemporary telecommunications networks in wireless and fixed line services.

With our vast heritage in delivering end-to-end connectivity solutions, HUBER+SUHNER is a value-adding partner in the Ground Communication application landscape. Of particular value is the fact that HUBER+SUHNER is able to deliver all products required in an end-to-end connectivity link out of its own portfolio. Whether it be interconnectivity products, RF-over-Fiber, multiplexers or optical switches, HUBER+SUHNER is leading from the front by offering drop-in ready solutions.

RF-over-Fiber

The RF-over-Fiber series enables the use of radio frequency and fiber optics in a single system. With these two technologies forming a part of HUBER+SUHNER's core technology offering, HUBER+SUHNER has used its vast experience to establish itself as the preferred provider of opto-electronic technology within the space market.

Optical switches

HUBER+SUHNER Polatis is the leading provider of all-optical switches, enabling low latency, fully transparent connections between optical fibers without requiring conversion between optical and electrical signals to offer much greater flexibility and energy efficiency. The patented DirectLight® optical switch technology connects fibers with the best possible optical performance. The modular, strictly non-blocking optical switch platform scales from 4×4 to 384×384 ports, applying class-leading performance to provide dynamic connectivity for government, data center, test, telecommunications, video network, gateways and teleports.

CWDM colour cubes

Coarse Wavelength Division Multiplexing (CWDM) is an excellent choice for increasing bandwidth capacity while keeping costs down. The COLOR cube family, based on standard Thin Film Filter (TFF) technology with a proprietary packaging, offers you smallest component dimensions combined with an outstanding performance and reliability.

Lightning and EMP protection

HUBER+SUHNER offers protection components for terrestrial, airborne and naval tactical communications as well as for navigation, radar and electronic warfare applications and Satcom. HUBER+SUHNER holds groundbreaking patents in the field of coaxial lightning and HEMP protection, such as the automatically suppressing surge arrestor (Semper).

Flexible low loss RF cables

The HUBER+SUHNER Spuma product family stands for lowest loss with halogen free materials. Shielding and VSWR are optimised up to 6 GHz. The cables are more flexible than corrugated ones, allowing easier handling and installation. Tight bending radii are possible. With this set of features, Spuma can support a multitude of applications. Spuma products can also be used as drop-in replacements for LMR® (LMR® is a registered trademark of Times Microwave Inc.).

Microwave cable assemblies

Cables and connectors from the same manufacturer

HUBER+SUHNER develops and manufactures coaxial cables and connectors for a broad array of applications world-wide. Connectors and cables can be optimized for superior electrical performance, offering over 1700 different configurations.

Customers can trust the reliability and quality of HUBER+SUHNER products which are designed and tested per IEC, MIL, CECC among other standards.

Our extensive know-how in RF technology and state of the art manufacturing facilities allow our teams to offer reliable and competent technical consulting and support.

HUBER+SUHNER engineers have vast experience assisting projects optimizing cable connector combinations for the most demanding applications.

Microwave cable assemblies to your specifications

Increase efficiency and productivity in your company by ordering ready-to-use microwave cable assemblies from the specialists. Expert assembly by soldering, clamping or crimping technique and inspection records according to your specifications enabling you to order with confidence, whether built to print or from our portfolio of stock assemblies.

SUCOFLEX 100

The low loss, high performance microwave cable assembly

- For static and dynamic applications up to 50 GHz
- Excellent return loss
- A wide range of connectors is available, including types which feature NWA-specific interfaces, and can be provided with various ruggedizations to protect the assembly against different environmental influences
- Stock assemblies available

SUCOFLEX 200

The loss revolution for dynamic applications

- For static and dynamic applications up to 40 GHz
- Ultra low loss
- Outstanding phase stability vs. temperature
- Excellent return loss

SUCOFLEX 300

The light-weight, low-loss microwave cable assemblies

- SUCOFLEX 300 series offers consistent outstanding mechanical and electrical performance, stability and reliability up to 40 GHz
- Weight reduction of up to 40 % compared to our conventional products
- Assemblies produced in a clean environment room (class 100)

SUCOFLEX 500

When it comes to test and measurement, SUCOFLEX 500 assemblies guarantee the highest level of satisfaction Torque, crush and kink resistant

- Precise and repeatable measurements
- Long service life
- Reduce total cost of test with durable, reliable performance
- Increased test and measurement efficiency saving costs due to reduced calibration intervals

Summary of SUCOFLEX® qualifications

The entire SUCOFLEX family is certified to the following standards through testing, analysis or similarity.

Temperature, altitude and humidity

MIL-STD-810, method 518.1, procedure I

Thermal shock

MIL-STD-202, method 106, condition B1, 25 cycles, temperature: -54 to 125 °C

Mechanical shock

MIL-STD-810, method 516.3, procedure I (half-sine), 20 g, 6 to 9 ms, 45 Hz cross over frequency

MIL-STD-810, method 516, procedure I (saw-tooth), 40 g saw-tooth pulse of 11 ms duration 3 shocks in each of the six directions

Vibration

MIL-STD-810, method 519.3, procedure I, figure 514.3-1, (gunfire), 26.5 min. with specified vibration profile

MIL-STD-810, method 514.3, procedure I (random), functional: 0.2 g²/Hz, endurance: 0.83 g²/Hz

MIL-STD-202; method 204, condition G (sinusoidal), acceleration: 30 g, frequency range: 10 to 2000 Hz, duration: 4 hours in each of three axes

Acceleration

MIL-STD-810, method 513.3, procedure II, 27 g, 5 min.

MIL-STD-810, method 513.3, procedure I, 50 g, 5 min.

Chemical resistance

British standard 3G100, part 2, section 3, class A

Moisture resistance

MIL-STD-202, method 106, 10 day exposure

Salt fog

MIL-STD-810, method 509.2, 48 hours exposure to a 5 % solution

Fungus

MIL-STD-810, method 508.3

Sand and dust

Def. stand. 07-55, part 2, section 4, issue 1, +35 °C, 3 hours

Solar radiation

MIL-STD-810, method 505, procedure II

Overview SUCOFLEX® 100

The high performance microwave cable assembly

Product description

SUCOFLEX 100 series flexible microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series is a high-end product designed to provide optimal performance up to 50 GHz, where stringent electrical requirements – in particular stability and low loss – are important. Their mechanical and climate resistance properties surpass those of standard flexible cables. This cable type is ideally suited to test and measurement applications (as test leads) and used in aerospace and defence systems.

Product features

- The cable maintains stable electrical characteristics when exposed to bending and temperature, enabling reliable test results
- A balanced range of connectors is available, including types which feature NWA-specific interfaces
- Can be provided with various ruggedisations to protect the assembly against different environmental influences
- Available as assembly only

Recommended connectors

SF101 / SF101P	SMA, SK, PC2.4
SF102	SMA, BMA, N, TNC, PC3.5, SK, PC2.4
SF103	BNC, SMA, BMA, N, TNC, PC7, PC3.5
SF126 SF104	BNC, 7/16, SMA, BMA, QMA, TNC, N, QN, PC7, PC3.5
SF106 SF118	7/16, SMA, N, QN, TNC
Other connectors available on request

Armoring options

Type A

Consists of a steel spring (round wire), steel braid and polyurethane (TPU) jacket. Up to +85 °C, this ruggedization offers excellent protection against compression, tension, abrasion and other mechanical forces acting upon the cable.

Armoring

Surface	TPU
Max. crush resistance	80 kN/m
Torsional stiffness	$8.5 \times 10 \text{ Nm}^2/^\circ$

Max. tensile force

Ruggedization	1500 N
Cable connector junction	400 N

Type B

Consists of a flexible hose of stainless steel. The ruggedization protects the cable against compression, abrasion, mechanical injuries, open fire and hot objects (e.g. soldering irons).

The continuous temperature is limited by the cable to +165 °C, and in the immediate proximity of the connectors to the maximum connector temperature.

Armoring

Surface	stainless steel
Max. crush resistance	80 kN/m
Torsional stiffness	$3.2 \times 10 \text{ Nm}^2/^\circ$

Max. tensile force

Ruggedization	1000 N
Cable connector junction	500 N

Type D

Consists of an aramid yarn braid impregnated with silicon varnish. The ruggedization protects the cable against abrasion and brief high temperatures.

Armoring

Surface	aramid yarn braiding impregnated with silicon varnish
---------	---

Jacket options

Type E

Thermoplastic polyurethane (TPU) jacket for highest flexibility and a low bending moment

Type I

LSFH jacket (low smoke and free of halogen)

Qualifications

Temperature/altitude/humidity

MIL-STD-810C, method 518.1, procedure I

Thermal shock

MIL-STD-202, method 106, condition B1
25 cycles, temperature: -54 to 125 °C

Mechanical shock

MIL-STD-810D, method 516.3, procedure I (half-sine)
20 g, 6 to 9 ms, 45 Hz cross over frequency

MIL-STD-810, method 516, procedure I (saw-tooth)

40 g saw-tooth pulse of 11 ms duration
3 shocks in each of the six directions

Vibration

MIL-STD-810, method 519.3, procedure I, figure 514.3-1
(Gunfire)
26.5 min. with specified vibration profile

MIL-STD-810D, method 514.3, procedure I (random)
Functional: 0.2 g²/Hz
Endurance: 0.83 g²/Hz

MIL-STD-202; method 204, condition G (sinusoidal)
Acceleration: 30 g
Frequency range: 10 to 2000 Hz
Duration: 4 hours in each of three axes

Acceleration

MIL-STD-810D, method 513.3, procedure II
27 g, 5 min.
MIL-STD-810D, method 513.3, procedure I
50 g, 5 min.

Chemical resistance

British standard 3G100, part 2, section 3, class A

Moisture resistance

MIL-STD-202, method 106, 10 day exposure

Salt fog

MIL-STD-810D, method 509.2
48 hours exposure to a 5 % solution

Fungus

MIL-STD-810D, method 508.3

Sand and dust

Def. Stand. 07-55, part 2, section 4, issue 1
+35 °C, 3 hours

Solar radiation

MIL-STD-810, method 505, procedure II

SUCOFLEX® 200

The tape wrapped SUCOFLEX 200 microwave cable assemblies were specifically developed for applications where lowest insertion loss and highest phase stability versus temperature are required.

Assembly types

		SUCOFLEX 229	SUCOFLEX 240
Max. operating frequency	GHz	29	40
Impedance	Ω	50	50
Application		static	static
Velocity of propagation	%	82	82

SUCOFLEX® 300

The SUCOFLEX 300 light-weight, low-loss flexible microwave cable assemblies are high-end products designed to meet the stringent needs of space flight systems (e. g. satellites) and aerospace systems (aircraft, UAVs, helicopter, missiles), which are subjected to extremely severe operating conditions.

SUCOFLEX® 500

Short delivery time

Outstanding performance

Excellent price-performance ratio

When it comes to test and measurement, the SUCOFLEX 500 assemblies guarantee the highest level of satisfaction. Thanks to their unique cable and connector design, they deliver the best phase and amplitude stability versus flexure, movement, temperature and tensile stress, in combination with outstanding return and insertion loss up to 70 GHz.

Due to the rotary swaged low-loss inner conductor and the rugged construction, SUCOFLEX 500 assemblies typically withstand more than 100,000 flexures without degradation of performance and therefore have a very long life-time.

HUBER+SUHNER supplies all SUCOFLEX 500 standard length products within five working days and customised lengths are available within ten working days worldwide.

SUCOFLEX 570S

70 GHz

- Very long life time (> 20 000 flex cycles)
- Excellent insertion loss
- Outstanding phase and amplitude stability with flexure and movement

SUCOFLEX 550S

40-50 GHz

- Very long life time (> 100 000 flex cycles)
- Excellent insertion loss
- Phase and amplitude stability with flexure and movement

SUCOFLEX 526S

26.5 GHz

- Very long life time (> 100 000 flex cycles)
- Excellent insertion loss
- Outstanding phase and amplitude stability with flexure and movement

SUCOFLEX 526V

26.5 GHz

- Extremely flexible and ease of handling
- High stable electrical performance
- Best-in-class phase and amplitude stability with flexure, movement, temperature and tensile stress

Applications

- Bench top testing
- RF production testing
- Automated test equipment
- Vector network analyzers (VNAs)
- Scalar analyzers
- Portable test equipment
- RF module testing
- High speed digital testing (HSDT)

SUCOTEST 18(A)

Sucotest 18 is ideal for daily use in component and assembly shops, test labs, and high speed digital testing applications.

Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

Features and benefits

- Applicable up to 18.0 GHz
- Low insertion loss
- Excellent VSWR
- Unique loss stability
- High flexibility despite of armouring
- Phase and loss stability with flexure
- Crush-, torque and kink-resistant
- Waterproof IP68

Recommended connectors

ST_18	SMA, QMA, N
ST_18A	N, 7/16

SUCOTEST 18(A)

Attenuation (nominal values at +25 °C ambient temperature)

Power handling (maximum values at 25 °C ambient temperature and sea level)

SUCOTEST 26/SUCOTEST 40

The test lead up to 26/40 GHz

Product description

Sucotest 26/Sucotest 40 cable assemblies are high frequency, low loss cables which are five shielded for superior RF isolation. The internal stainless steel outer braid provides higher pull strength and lighter weight than RG style cable. Nomex and polyolefin jackets are also available.

Product features

- Impedance 50 Ω
- Applicable up to 26/40 GHz
- Amplitude stability: < 0.1 dB at 26.5 GHz for 200 flexes 180° in one plane around a 2" radius, 0.2 dB with 600 flexes
- Five shields for super RF shielding (~120 dB)
- Steel outer shield for high pull strength
- Low cost, available from stock

Recommended connectors

ST26	SMA
ST40	SK

Minibend series

The goal of the Minibend series is to provide the user with incredible flexibility in both cable assembly configurations and applications.

These cables incorporate numerous features that give them the smallest bend radii in the industry without compromising isolation, stability or durability. Our connectors complement this series with a patented design that eliminates soldering and strain relief on the cable allowing for the minimum bend radius at the connector. Whether the project requires low loss, high frequency or high isolation, small connectors or small bend radii, our qualified Minibend series of cable assemblies will exceed your requirements.

- Light weight and low profile
- Aerospace qualification heritage
- Available as low loss and highly phase stable cables
- Solderless cable junction design

Minibend/Microbend

Low profile, high performance flexible microwave coaxial cable assemblies with solderless joints, eliminates need for costly and space-consuming right angle connectors.

- Frequency range up to 85 GHz
- Triple shielded for high isolation
- Solid PTFE dielectric
- Direct replacement for 0.086 and 0.047 inch semi-rigid cables

Minibend L/Microbend L/Mini141

Low loss, high performance, flexible microwave coaxial cable assemblies with 30 % reduction in insertion loss as compared to the solid PTFE dielectric counterparts.

- Frequency range up to 65 GHz
- Triple shielded for high isolation
- Low density PTFE dielectric
- Low loss replacement for .047, .086 and .141 inch size cables

Minibend CTR

The Minibend CTR family combines the industry-renowned flexibility of HUBER+SUHNER Astrolab's bend-to-the-end connector termination technology with industry leading phase vs. temperature performance.

- Frequency range up to 70 GHz
- Triple shielded for high isolation
- Foamed PFA Dielectric
- Eliminates need for costly right angle connectors

Minibend H/Minibend LH/Mini141 H

Ultra-low loss microwave cable assemblies and optional ECTFE jacket for highest radiation resistance.

- Frequency range up to 85 GHz
- 5 shields for improved isolation
- Solid and Low density PTFE dielectric
- Up to 200Mrad radiation resistance when using ECTFE jacket

Minibend series

Standard

All cables utilise triple shields for superior RF shielding, with a solid PTFE dielectric for exceptional crush resistance without the need for heavy armour. The flat wire braid outer conductor provides low loss plus excellent insertion loss stability versus flexure. The stainless steel outer braid provides improved mechanical pull strength when compared to cables with a copper wire outer braid.

- Aerospace qualification heritage
- Smallest bending radii
- Steel outer shield for high pull strength
- Solid PTFE dielectric for exceptional crush resistance without the need for heavy armour

Minibend L – series

Low loss cable assemblies

Minibend L is an enhanced, low loss version of the Minibend flexible coaxial cable assemblies. Designed to be used in low profile, internal, point-to-point interconnections between RF modules within communications systems. The low loss cable family offers 0.047, 0.086 and 0.141 inch alternatives providing 30% lower attenuation than the standard flexible cables. Minibend L, mini141 and microbend L have Microporous PTFE dielectric providing improved phase characteristics, such as phase versus flexure and phase versus temperature. These cables are available in a variety of preassembled configurations, tested for high performance, cost-effective alternative in a range of standard lengths.

- Microporous PTFE for superior electrical performance
- Excellent phase and IL stability over flexure
- Aerospace heritage with standard assemblies
- Light weight and low profile

Minibend CTR – phase invariant cable assemblies

Phase invariant cable assemblies

The Minibend CTR family of cable assemblies combines the industry-renowned flexibility of HUBER+SUHNER As-trolab's solderless bend-to-the end connector termination technology with industry leading phase vs. temperature performance to create a stable, reliable, MIL-DTL-17 qualified interconnect solution to satisfy an endless range of customer applications where phase stability is key. The broad selection of connector interfaces offered on phase invariant cable assemblies ensures that we are able to meet the unique requirements of our customers.

- Increased system accuracy over temperature change
- Flat phase change over temperature
- Bend-to-the end technology
- Outstanding return loss performance
- Higher reliability due to solderless junctions

Space flight connectors

Our space flight-qualified connector portfolio has been designed for use within the most unique, robust and challenging applications. Our wide range of state-of-the-art connector interfaces, panel mount geometries, printed circuit boards (PCB) launch profiles, and customized solutions continue to drive significant growth in a highly specialized and dynamic technical sphere. Material selection of all HUBER+SUHNER space flight connectors meets and exceeds the requirements of MIL-PRF-39012.

Innovative solutions, such as the SMPM-T connector interface, continue to bolster HUBER+SUHNER's commitment to serving our space flight customers.

Features

- State-of-the-art space flight connectors
- Extensive flight heritage
- SMPM-T, the smallest threaded open source connector
- Solutions up to 65 GHz
- Space qualification heritage according to MIL standards
- Superior customer service

Benefits

- Unique and robust solutions
- One-stop-shop for space flight solutions
- Future-proof solutions

MIL-STD-348 compliant connectors

SMP, SMP-SL, SMPM and SMPM-T connectors are MIL-STD-348 compliant interfaces.

SMP-SL and SMPM-T are unique and innovative lockable versions which guarantee unprecedented electrical and mechanical performance even under extreme Aerospace conditions.

Power Sub-Miniature «PSM»

The PSM (Power Sub Miniature) interface meets the increasing demand for cost effective, low weight and power sensitive Aerospace applications. The PSM connector system enables customers to maximize connector density and minimize overall system weight.

- Space qualified per MIL-PRF-39012 and ESCC 3402

Space flight connector portfolio

The HUBER+SUHNER space flight connector portfolio has an extensive heritage, spanning more than two decades. The portfolio includes panel-receptacle connectors, Printed Circuit Boards (PCB's) and bulk-head cable connectors, which covers most space flight applications. Also hermetically sealed connectors are available. All designs, materials and processes comply with ECSS and NASA requirements.

Customized connectors/design capabilities

HUBER+SUHNER provides customized space flight connector solutions for applications that are not available in the space flight connector portfolio. Adaptations and new configurations can be developed and produced according to the relevant space flight requirements. Utilizing our world-class, on-site testing facilities, we are also able to perform verification tests, lot acceptance tests and qualification campaigns to meet verification and regulatory requirements of customized products.

SMP

Description

HUBER+SUHNER Astrolab SMP connectors provide a robust, proven and fully compatible plug-in solution for applications up to 40 GHz. HUBER+SUHNER Astrolab SMP connectors have been MIL-SPEC qualified for defence and space flight hardware. The design of the interface and materials treating provide true compatibility as well as guaranteed mechanical performance over the mating life of the connector with all MIL-STD-348 SMP connectors in the market.

Interface dimensions (mm/inches)

SMP female

SMP male, full detent

SMP male, limited detent

SMP male, smooth bore

SMP male, catchers mitt

Compatibility

50 Ω SMP connectors are intermateable without restrictions.

SMPM

Description

HUBER+SUHNER Astrolab SMPM connectors offer unrivaled miniaturisation and performance for RF applications up to 65 GHz. HUBER+SUHNER Astrolab SMPM connectors are MIL-SPEC qualified for defence and space flight applications. Along with the unique bend-to-the-end microbend style cable connectors,

HUBER+SUHNER Astrolab offers a large portfolio of different PCB mount SMPM connectors that have been designed with optimised PCB trace launch geometries to offer a complete interconnect design solution from "wire-to-trace".

Compatibility

50 Ω SMPM connectors are intermateable without restrictions.

SMPM-T

Description

The SMPM-T is the smallest threaded open source connector on the market. Its unique and innovative combination of a MIL-STD-348 SMPM female interface connector together with a retractable threaded nut provides an integrated solution offering unprecedented electrical and mechanical performance. The SMPM-T handles high density requirements with a connector centerline-to-centerline spacing of just 5 mm (0.20 in) while offering unmatched electrical stability at frequencies up to 65 GHz in even the harshest operating environments.

The SMPM-T connector is available along with HUBER+SUHNER Astrolab's industry driving microbend "bend-to-the-end" technology that is already qualified for any aerospace application. The SMPM-T connector complies with the hi-rel material restrictions of NASA while still offering full compliance with RoHS and REACH legislation in the commercial market.

Compatibility

50 Ω SMPM-T connectors are intermateable without restrictions.

SMP Self Lock «SMP-SL»

Push-on connector that doesn't pull off

Threaded connectors

- Most common interface for space-flight applications
- Secured connection under vibration and shock levels
- Torque tools entail excessive installation time and cost

Push-on connectors

- SMP connector
- Utilized to minimize installation time
- Low endurance of the interface under severe environmental conditions
- Limited use in aerospace applications
- SMP Self Lock «SMP-SL»
- Flight ready push-on connector operating up to Ka-band (40 GHz)
- Greatly reduces the installation time
- Retains the durability of a threaded connector
- Does not exceed the standard SMP connector envelope

Design features and benefits

- Single audible click when locked
- Red colored locking ring provides a visual inspection point
- Retains the small form factor of a standard SMP interface per MIL-STD-348
- Risk for unintentional de-mating eliminated – dedicated removal tool needed
- 66 % lower mass compared to equivalent solutions in the market

SMP-SL: product portfolio

HUBER+SUHNER cables supporting SMP-SL

- Mini141
- Minibend® L

Adaptors

- SMP-SL plug to SK plug
- SMP-SL jack to SK plug
- SMP-SL plug to SK jack
- SMP-SL jack to SK jack
- Various PCB and flanged connectors
- Custom de-mating tools
- Additional SMP-SL configurations available on request.

Power Sub-Miniature «PSM»

PSM (Power Sub Miniature) interface meets the increasing demand of cost effective, power and weight sensitive Aerospace applications. Especially developed for Space Flight, High Altitude Platforms and TVAC environments. Space qualified per MIL-PRF-39012 and ESCC 3402. The PSM connector family has the size and weight of an SMA and the power handling capabilities of a standard TNC per MIL-PRF-39012 and MIL-STD-348. The PSM connector system enables customers to maximize performance on power handling while minimizing overall system weight and size. Multipaction breakdown and corona withstanding meet or exceed TNC interface level.

Features and benefits

Power handling capabilities like a TNC per MIL-PRF-39012.

- SMA size and weight
- Multipaction and Corona resistant
- Non magnetic and low PIM
- Space qualified
- Cable assemblies, panel connectors and adaptors

PSM – technical data

Electrical data	Requirements
Impedance	50 Ω
Frequency range	DC-18 GHz
Return loss	see table below
Insertion loss	0.05 dB typ.
RF leakage	< -90 dB
Working, dielectric and RF voltage	driven by multipactor requirements
Corona threshold	peak power 800 W
High power handling under vacuum	1 GHz: 150 W (CW) 4 GHz: 76 W (CW) 12 GHz: 40 W (CW)
Multipactor threshold 20 μ s, 2 % duty cycle	peak power 800 W
PIM performance, 2 x 20 W	-168 dBc (3rd order power at 1900 MHz)
Insulation resistance	> 5000 M Ω
Contact resistance – centre conductor outer conductor	< 2 m Ω < 2 m Ω

Return loss	Frequencies			
(typical values)	1 GHz	4 GHz	12 GHz	18 GHz
Connector straight	36 dB (1.03)	31 dB (1.06)	28 dB (1.08)	26 dB (1.10)

Mechanical data	Requirements
Recommended coupling nut torque	≥ 1.5 Nm/13.3 in lbs
Coupling nut retention force	≥ 250 N/56.2 lbs
Contact captivation	≥ 27 N/6.1 lbs
Cable retention force	≥ 100 N/22.5 lbs
Durability (matings)	≤ 100

Environmental data	Requirements
Temperature range	-65 to +165 °C (thermal vacuum test)
Thermal shock	MIL-STD-202, method 107 condition B
Moisture resistance	MIL-STD-202, method 106
Corrosion	MIL-STD-202, method 101 condition B
Sine vibration	MIL-STD-202, method 204, 28 g peak
Random vibration	MIL-STD-202, method 214 condition K-I, 46.3 g
Shock	MIL-STD-202, method 213, 12000 g peak

Space qualified per	MIL-PRF-39012, ESCC 3402
---------------------	--------------------------

Material data

Connector part	Material	Plating
Bodies	copper-beryllium alloy	gold
Pin contacts	copper-beryllium alloy	gold
Coupling nuts	copper-beryllium alloy	gold
Insulator	PTFE	--

PSM – cables

Pre-terminated cable assemblies with straight male and female PSM connectors are available with Mini141H, SucoFlex 329, semi-rigid 141 low loss and semi-rigid 141 standard.

	Mini 141 H 32021E	SUCOFLEX 329	35000	30141 EZ 141
Type	flexible	flexible	semi-rigid	semi-rigid
Type of junction	solderless	soldered	soldered	soldered
Velocity nominal (%)	76.5	84.0	82.0	69.5
RF leakage assembly (dB) at 18 GHz	> 110	> 90	> 100	> 100
Static bend radius (inch min.) / [mm min.]	0.33 / [8.38]	0.90 / [23]	0.75 / [19.05]	0.12 / [3.18]
Weight (lbs/100 ft nom.) / [g/m]	2.70 / [40.20]	2.70 / [40.20]	2.75 / [40.95]	1.07 / [30.5]
Insertion loss at 18 GHz (dB/100 ft) / [dB/m]	62 / [2.03]	35 / [1.15]	45 / [1.48]	59 / [1.93]
OD max. diameter (in) / [mm]	144 / [3.68]	210 / [5.33]	141 / [3.58]	141 / [3.58]
Shields	5	3	—	—
Dielectric	Microporous PTFE	Microporous PTFE	Microporous PTFE	PTFE

* Frequency limited due to power handling capacity.

Customized connectors/ design capabilities

The connector product portfolio qualified for use in space is designed for the most unique and difficult customer applications. The array of connector interfaces, panel mount geometries, printed circuit board (PCB) launch profiles, and customized design solutions is growing dynamically in response to the high technical demands of our customers. The materials selection of our connectors meets or exceeds the requirements of MIL-PRF-39012. The connectors can be designed to incorporate either mechanically captivated contacts or the contacts can be provided uninstalled to the customer.

Panel mount and PCB launch connectors are designed taking into account the unique design constraints of each customer application to provide optimized electrical and mechanical performance in any mounting style or launch topography. Several options are available for specific application requirements such as low-Passive Intermodulation (PIM), epoxy staking, and high RF shielding performance. We also offer rigorous special process control support to provide PCB connectors that will not suffer from the effects of solder joint gold embrittlement.

Optimized connector/PCB Solutions

Only by using an optimized footprint can the performance of the connectors be unleashed. HUBER+SUHNER offers optimized connector/board solutions based on your actual designs:

- 3D field simulation
- Optimized footprints (incl. connector) as gerber files

Application Engineering

HUBER+SUHNER has a team of specialists supporting your specific application. We have more than 25 years of experience within the industry and have successfully participated in many programs. Make use of our broad knowledge on connectors, cables and cable assemblies.

MMBX for space

The first two Galileo satellites have been orbiting the Earth since October 2011. They were joined by a second pair in October 2012. These four satellites have been used to test the infrastructure's functional capacity, both in space and on the ground. Further satellites will enter orbit during the following years, featuring radio frequency connectors from HUBER+SUHNER for connecting the navigation antenna to the satellite.

Since the radio frequency power was increased during Galileo's development, the various components involved also needed to be modified to meet the new requirements. HUBER+SUHNER is providing custom specific connectors based on the MMBX board-to-board solution that are capable of transferring the higher power level required. These connectors feature a special design with excellent properties to improve the high power transmission (no multipactor effect), the overall PIM performance, cope with the mechanical misalignment and excellent return loss. The full performance is guaranteed over the full range of temperature (-120 to $+120$ °C).

To ensure that the individual parts meet the strict ESA requirements for use in space, they are assembled in our cleanroom facility at HUBER+SUHNER.

High density connectors

High density solutions help saving on installation time, weight, space and eliminating routing errors during integration.

- Based on 67 GHz MIL-STD-348 SMPM interface.
- Keyed harnesses for effortless channel traceability.
- Threaded locking nuts and guiding pins guarantee electrical and mechanical performance under harshest conditions.

- Smallest possible centerline to centerline distance guarantee highest channel density with smallest PCB foot-print.
- The low mass connector design in combination with the highly flexible and solderless minibend cable assemblies offer compact and low mass RF connectivity up to 67 GHz.

- Custom channel configurations are available on request

TVAC cable assemblies

Simulating the extreme conditions encountered in space imposes severe requirements on all components, from the test subject inside the thermal vacuum chamber through to the measurement installations on the outside. Exposure to rapid, large-scale thermal gradients within a vacuum environment requires carefully selected materials and designs that can mechanically and electrically withstand these extremes without the risk of multipaction and corona phenomena.

The use of high-power, low-outgassing materials, precision connector designs and innovative manufacturing techniques has allowed HUBER+SUHNER to provide durable, reliable TVAC cable assemblies and connector solutions for our customers within a broad range of TVAC applications.

Features

- In-house thermal aging of components
- Low outgassing materials in accordance with ECSS-Q-ST-70-02 C and NASA reference publication 1124
- Superior mechanical and electrical stability
- Perfectly matched cables and connectors from a single manufacturer
- Cable assemblies and components available for extremely high-power applications

Benefits

- Vented connectors for fast evacuation
- Longer lifetime, lower costs
- Customized configurations available

SUCOFLEX 100 TVAC – the versatile all-rounder

- Frequency range up to 65 GHz
- Perfectly matched cables and connectors from one manufacturer
- Broad range of cables and connectors available
- Pure jacket and arms for superior flexibility
- Vented connectors
- Armed options available

SUCOFLEX 200 TVAC – the high performance solution

- Frequency range up to 40 GHz
- Ultra low loss: typ. 1 dB/m at 18 GHz
- Fully MIL/DTL-17 qualified
- Extended temperature range

32071 TVAC – for high power applications

- Frequency range up to 14 GHz
- Capable of 500 W CW power handling in an ambient environment of +150 °C and vacuum conditions
- Extensive thermal ageing and stabilisation of the cable assembly is a standard manufacturing process
- Straight TNC, N and SC connectors
- High reliability

Phase stable over temperature raw cables and assemblies

The HUBER+SUHNER CT product family is developed for phase critical applications requiring precision electrical length connectivity. Thus, it creates a stable and reliable interconnect solution to satisfy a huge range of customer applications where phase stability is key. These products provide the industry leading phase vs. temperature performance, as well as a unique range of cable constructions to fulfil any customer TVAC demands.

SUCOFLEX® 100 TVAC

Electrical specifications	
Impedance (nominal)	50 Ω
Operating frequency	DC – 67 GHz
Velocity of propagation	77 % 71 % (SF 167)
Insertion loss variation vs. temperature	≤ 0.0021 °K ⁻¹ ≤ 0.0018 °K ⁻¹ (SF 167)
Return loss (typical)	> 25 dB @ 6 GHz > 21 dB @ 12 GHz > 20 dB @ 18 GHz > 19 dB @ 40 GHz > 16 dB @ 67 GHz

Thermal vacuum hermetic sealed adaptors

HUBER+SUHNER offers a wide array of hermetic feed-thru style adaptors that offer both in-series and between series interface solutions for TVAC testing applications. The hermeticity is provided through a glass-fired seal within the adaptor body. The glass material is selected to provide the best electrical performance while also matching the coefficient of thermal expansion of the surrounding body and contact as closely as possible to prevent any loss of hermeticity. All of the hermetic adaptors are 100 % tested for hermeticity in accordance with ASTM E-498, MIL-STD-202, and MIL-STD-883. The guaranteed leakage rate is less than 1×10^{-8} ccm/second of helium under a pressure differential of 15 psig (1 bar).

2.9 mm jack – 2.9 mm jack, jack hermetic/29485G-4

Impedance	nominal	50 Ω

SMA jack – TNC jack, bulkhead, hermetic/29003-0-3G

Impedance	nominal	50 Ω
Frequency	max.	10 GHz
Insertion loss	max.	0.35 dB
VSWR	max.	1.20 : 1
Temperature range		–55 to +125 °C
Standard		MIL-STD-348
Hermetic seal		MIL-STD-202, MIL-STD-883 and ASTM E-498

Space flight phase shifters

The phase shifter product family is designed for use in electronic systems where precision adjustment and tuning of transmission line electrical lengths are required. The phase shifter, or line trimmer, is designed to allow precise in-line phase change while maintaining constant VSWR and Insertion Loss performance values. The construction of the phase shifters incorporates fine gauge threads for precise tuning accuracy at a resolution of less than 0.1 degrees. A variety of interfaces and phase adjustment ranges are available with operation up to 26 GHz. These passive devices have proven successful in aerospace and satellite programs with flight heritage in both North America and Europe.

32071 high power cable assemblies

The 32071 cable assembly offers incredible benefits to not only withstand extreme temperature and high altitude conditions, but also provide outstanding performance at high power levels. Based on its Fluoroloy® loaded connectors we can guarantee up to 500 W CW power at 150 °C under vacuum.

In addition, HUBER+SUHNER provides a comprehensive array of Fluoroloy® loaded panel connectors and feed-throughs for high power applications. Fluoroloy® has a higher dielectric constant (as compared to standard Teflon dielectric), but also a higher rate of thermal conductivity. This provides a more effective and efficient transfer of the heat generated at the center conductor, thus increasing the power handling capability of the connector. Fluoroloy® dielectric is available as an option on all of our connector types, should the power levels of the application require it.

32071 – high power, low loss

Product description

Boa-flex II cables utilize a microporous PTFE dielectric for low loss with minimal phase change due to temperature changes and flexure. Typical velocity is 78 % of the speed of light. All offer very low loss and are extremely stable with flexure.

Product features

- Impedance 50 Ω
- Applicable up to 14 GHz
- Low density PTFE for superior electrical performance
- Helical wrapped outer conductor for increased electrical performance
- Exceptional phase and insertion loss stability with flexure
- Excellent phase vs. temperature characteristics
- Preferred for phase matching and tracking applications

32071 – high power connectors and adaptors

29396G3-ELPV

- Hermetic TNC jack to TNC jack bulkhead adaptor
- Positively vented and pre-potted
- Frequency range up to 10 GHz
- Designed for high power and multipaction-free applications

29713-46ELPV

- Panel mount TNC jack connector
- Integrated heat sink for high power handling capability
- Positively vented and pre-potted
- Frequency range up to 14 GHz
- Designed for high power and multipaction-free applications

Spuma – the flexible low loss standard

The HUBER+SUHNER Spuma product family stands for lowest loss with halogen free materials. Shielding and VSWR are optimised up to 6 GHz. The cables are more flexible than corrugated ones, allowing easier handling and installation. Tight bending radii are possible. With this set of features, Spuma can support a multitude of application in various industries, including railway, defense, communication, instrumentation and others. Spuma products can also be used as drop-in replacement for LMR® (LMR® is a brand of Times Microwave Inc.).

Features

- 6 GHz
- Excellent insertion loss
- High flexibility due to rotary swaging technology

Benefits

- Highly efficient RF signal distribution
- Halogen free and flame retardant
- Easy to install

Spuma – most cost effective

The standard Spuma cables provide the full range of benefits of the series for general use applications.

Applications

- Outdoor use

Markets

- Wireless infrastructure
- Defense

Spuma FR – flame retardant

The flame retardant Spuma cables provide great flame retardancy making the range viable for rolling stock and indoor applications.

Applications

- Outdoor and indoor use
- Railway approved:
 - EN 45545-2
 - NFPA 130

Markets

- Railway
- Defense
- Wireless infrastructure
- Industrial

Spuma RS FR – rotary swaged & flame retardant

The patented rotary swaging technology (low-loss strand) allows to overcome the common trade-off between flexibility and low attenuation. Furthermore, the new TPU jacket material provides flame retardancy without compromising on flexibility.

Applications

- Outdoor and indoor use
- Best compromise between loss and flexibility
- Environments with limited space

Markets

- Defense
- Test and measurements
- Railway

RF-over-Fiber series

The market is evolving at a significant pace. With customers seeking to converge multiple technologies into a single solutions, HUBER+SUHNER has positioned itself to be able to provide customers with end-to-end hybrid solutions.

The RF-over-Fiber Series enables the use of radio frequency and fiber optics in a single connectivity link. With these two core technologies, HUBER+SUHNER is using its vast experience and expertise to deliver best-in-class opto-electronic technology to the market.

The RF-over-Fiber Series consists of three core product lines, namely; RF-over-Fiber (RFoF), GPS-over-Fiber (GPSoF) and LAN-over-Fiber (LANoF).

The main advantages that RF-over-Fiber links have over traditional RF links are that they:

- allow for greater distances between the RF source and the RF receiver system
- are immune to EMI and RFI
- are immune to EMP
- are more difficult to intercept („tap“)
- are lighter in weight

System components

RF-over-Fiber (RFoF)

- 100 KHz to 40 GHz
- Low noise options and duplex systems
- Simplex and duplex systems
- Fully configurable

GPS-over-Fiber (GPSoF)

- L1 and L2 bands
- Covers all major GNSS services
- Multiport receivers
- 1 PPS and 10 MHz

LAN-over-Fiber (LANoF)

- Gigabit connectivity
- Fully configurable

Applications

SATCOM

In SATCOM applications, RF-over-Fiber enables communication between satellites and control centers. The communication link is created by connecting the antenna to the control center.

RF-over-Fiber supports both fixed earth installations as well as mobile applications.

Test environments

RF-over-Fiber is ideal for test environments due to its immunity to RF and EM interferences. With frequency ranges up to 40 GHz, RF-over-Fiber delivers value-adding performance in sensitive environments. A perfect choice for TVAC environments due to the small cable footprint and interconnect panel footprints that facilitate high-density (1:n DUT) testing.

RF-over-Fiber links > 100 GHz currently in development.

Timing distribution

The distribution of precise time and reference signals is growing rapidly in its utility within the space industry. Whether GPS-based or OXCO oscillator-driven 1PPS/10 MHz signal distribution, HUBER+SUHNER has a comprehensive portfolio of timing products and capabilities.

Airborne

High density RF connectivity with a significantly reduced cable footprint is key to the success of the HUBER+SUHNER airframe solution. Weight reduction and cost optimization are achieved by using less material as well as speeding up the installation and maintenance processes.

Ideal for aircraft, UAV's, aerostat and other airborne applications.

RF-over-Fiber

Driven by a philosophy of providing high density RF connectivity, while significantly reducing cable footprints. HUBER+SUHNER's single mode, simplex and duplex systems are both flexible and perfect for harsh environments. Flexibility is achieved by providing customers with a wide range of options when it comes to inter-connectivity, while the scalability of the systems enables an unlimited RF connectivity density.

The use of HUBER+SUHNER's renowned components, such as RADOX and Q-ODC-12, ensures that the system can be deployed in any environment and with a significantly smaller cable footprint.

The standard RFoF modules are available in 1, 6 and 12 ports and cover a wide frequency range of 100 KHz to 40 GHz. The systems are capable of covering distances of up to 100 km and are perfect for applications requiring secure, low loss, light-weight and high-density connectivity.

RF-over-Fiber RFoF4+WDM – 22 GHz LN (TRM)

The Multiplexed RF-over-Fiber Transceiver Module [RFoF4+WDM–22 GHz LN (TRM)] is a bi-directional, multi-channel solution that converts analog RF signals into fiber signals; and then converts the fiber signals back into RF signals. The module multiplexes 8 channels onto a single fiber using our state-of-the-art WDM technology. The module offers a wide frequency range up to 22 GHz, with very low noise, excellent all-round link stability and performance.

Features

- Integrated WDM
- Extremely low noise figure
- Wide bandwidth from 1 GHz to 22 GHz
- Flexible form factor options

Applications

- Defence applications
- Test environments

Order information

Item description	Item no.
RFoF4+WDM – 22 GHz LN (TRM)	85109690
RFoF4+WDM – 22 GHz LN (TRM) [M]	85117566

Additional Information

- All modules are RoHS compliant.
- All modules are EMC protected.
- DIN 35 brackets are delivered with each module. Other brackets available upon request.
- MIL and other certifications are possible upon request.
- Various racks and enclosures available.

GPS-over-Fiber (GPSoF)

Our GPSoF modules are focused on distributing a single GPS signal into multiple receiver systems. This approach ensures that signal data, such as time synchronization into separate, yet connected, systems is always the same. Standard GPSoF systems include both single and multiport solutions; and accommodate both L1 and L2 bands.

In addition to the GPSoF modules, HUBER+SÜHNER also provides a Time and Frequency Standard (TFS) module. This module uses 1PPS to ensure that time synchronization is still possible in the event of a loss of GPS signal. The pulse is synchronized to the average of the GPS signal. The module also provides a 10 MHz electrical output, which is used for reference signaling. The small form factor of the GPSoF modules ensures that the systems are ideal for both fixed and mobile applications, where space may be limited.

LAN-over-Fiber

With the use of multimedia continuing to increase within the operations landscape (from planning to de-briefing), our modules are focused on providing Gigabit connectivity within challenging environments.

Again, the use of HUBER+SUHNER's RADOX and Q-ODC-12 components ensure that the exposed portions of the system remain functional within harsh environments, while the interconnect within a mobile structure (shelter or vehicle) remains robust and functional within environments exposed to, for example, intense vibration.

The standard LANAoF modules are available in 1, 6 and 12 ports and can be easily integrated into existing network infrastructures. The LANAoF system is particularly well suited to applications that require "field LAN" capabilities for data synchronization, diagnostics, remote identification and software distribution.

LAN-over-Fiber		# of LAN ports			Key technical parameters/features

Customized modules

The modular design of the RF-over-Fiber series products ensures that HUBER+SUHNER is able to provide fast, flexible and cost-effective customizations that meet our customers' application requirements.

Customized options include

- Small-form-factor for applications that have limited space available
- Housings that support the light-weighting requirements of an application
- A combination of RF, GPS and LAN functionality into a single module
- Ruggedization for use in harsh environments (i.e. extreme temperatures, vibration and shock)
- High-density housings for applications that need to limit the amount of hardware within the solution without compromising on connectivity density
- Customer-specific interconnect options (for both RF and FO)
- Rack-mountable housings

Small-form-factor

- Housings that support the light-weighting requirements of an application
- Small-form-factor for applications that have limited space available

Combined technologies

- Rack-mountable housings
- A combination of RF, GPS and LAN functionality into a single module

Ruggedized enclosures

- Rack-mountable and high-density housings
- Ruggedization for use in harsh environments (i.e. extreme temperatures, vibration and shock)

Key application: SATCOM

(Makes use of RFoF and LANoF)

In SATCOM applications, RF-over-Fiber enables communication between satellites and control centers. The communication link is created by connecting the antenna to the control center. RF-over-Fiber supports both fixed earth installations as well as mobile applications.

Broad frequency ranges, excellent performance and security are critical aspects that are perfectly addressed by HUBER+SUHNER's RF-over-Fiber products. With single modules that cover the all intermediate frequency (IF) signals as well as the L, S and C bands, HUBER+SUHNER not only meets the frequency range requirements in SATCOM, but also has low noise modules in its portfolio that can be used in noise-sensitive applications. The low noise modules offer a 50 % lower noise figure, from 15 dB to 7 dB (IF signals).

Excellent performance and the security of the SATCOM links are further supported by immunity to EMI, RFI and EMP.

The use of LAN-over-Fiber is growing within the SATCOM applications landscape. Ethernet connectivity for VOIP, VPN connectivity and other data network services are easily integrated into both fixed and mobile infrastructures. Gigabit LAN modules ensure the future-proofing of all SATCOM applications.

Key benefits

- | | |
|----------------------|---|
| • Security | Immune to EMI and RFI. Lower risk of interception. |
| • Better performance | Greater distances covered, immune to EMP and very low loss. |
| • Mobility | Less cable and weight supports rapid deployment in mobile applications. |
| • Efficient | Faster and simplified installation and maintenance
(key in mobile applications – SNG and VSAT) |

Solutions business

Products

With the market rapidly moving to **combine technologies and to increase connectivity density**, our growing system product portfolios provide the bridges for the delivery of end-to-end solutions.

Services

HUBER+SUHNER's **global supply chain network and engineering footprint** enables us to provide our customers with a one-stop-stop for their service needs. Our servicing offering includes kitting, painted antennas, sourcing, project management and other value-adding services.

Sub-systems

Excellence in engineering and manufacturing provides the basis for delivering added value to our customers within the sub-systems area. HUBER+SUHNER **is perfectly positioned to deliver hybrid, multi-product and build-to-print solutions**.

End-to-end connectivity solutions

The nature of systems developments and Implementations requires global **project excellence** along with a focus on delivering solutions instead of components. Our **turn-key solution approach** (which combines project management, solution design capabilities and high performing products) is a key differentiator in this fast-growing area of our business.

Solutions – examples

Cable solutions

With radio frequency, low frequency and fiber optic technologies all core competencies of HUBER+SUHNER, we are able to provide a host of harnessing and hybrid assembly cable solutions.

Bespoke componentry

Project-specific componentry forms a significant part of the HUBER+SUHNER value proposition. Our Metalized Additive Manufacturing capabilities, in particular, is generating a lot of interest in the filter, diplexing, antenna, and space-flight waveguide space.

Box builds/mechanical integration

Mechanical integration is a key part of applications that have limited space and that are built into customer-specific sub-systems. HUBER+SUHNER's box build offers additional value by streamlining the integration process, while ensuring superior quality and performance.

End-to-end connectivity solutions

Command and control centers require a host of space-grade RF components. HUBER+SUHNER's space portfolio covers all of the products required for an end-to-end connectivity solution. These include connectors, EMPs, antennas, cable assemblies as well as a host of interface panes, racks and junction boxes.

Polatis optical switching solutions

HUBER+SUHNER Polatis is the leading provider of all-optical switches, enabling low latency, fully transparent connections between optical fibers without requiring conversion between optical and electrical signals to offer much greater flexibility and energy efficiency. The patented DirectLight® optical switch technology connects fibers with the best possible optical performance. The modular, strictly non-blocking optical switch platform scales from 4x4 to 384x384 ports, applying class-leading performance to provide dynamic connectivity for today's network services.

Polatis all-optical switches are time proven in mission-critical network applications, with key features that enable operators and systems integrators to deliver secure, scalable, reliable, manageable and cost-effective optical cross-connect capabilities.

Polatis Optical Switching Solutions

SDN-enabled all-optical switch

Embedded OpenFlow and NETCONF interfaces enable a faster deployment of new software-defined network solutions.

Industry leading port density

Broadest portfolio available on the market from 4x4 up to 384x384 fiber ports per switch, also available in asymmetric (MxN) and reconfigurable (M-fiber) configurations.

Adds flexibility to today's network services

Automated fiber provisioning, protection, monitoring, reconfiguration and test applications.

Transparent connectivity and superior performance

Low optical loss and dark fiber switching enables dynamic, bandwidth-agnostic network architectures with minimal system impact and near-zero latency.

Proven track record

The reliable, field-proven DirectLight™ optical switch technology powers more than 2000 systems worldwide.

The Potential of All-Optical Switching

Network operators are searching for bandwidth-on-demand capabilities that allow them to direct network capacity where and when it is needed, with performance guarantees to support latency, jitter and availability requirements for a range of diverse applications. Adoption of dynamic fiber cross-connects to bring the physical layer under software control allows rapid provisioning, protection and reconfiguration of network resources on-demand bringing additional benefits to operators, including:

- Eliminating manual patch errors and the potential for service interruption
- Maintaining current state of physical layer connectivity in a software database
- Creating optical demarcation points in multi-tenant/multi-service provider environments
- Facilitating bridge and roll during equipment commissioning, upgrade and replacement
- Providing physical isolation between virtualized network slices for enhanced security
- Enabling aggregation of optical taps for network monitoring
- Automated protection services for individual or groups of traffic lines

Since all-optical circuit switches do not require any optical-to-electrical conversions, they consume very little energy and add virtually no latency to the data path. Connections are fully transparent and format independent, which makes them ideal for use in network infrastructures where optical transmission rates continually advance.

While individual optical circuit switches can provide up to a few hundred ports of non-blocking connectivity, scaling beyond this level is only possible using multi-stage cross-connect fabrics. These multi-stage fabrics operate within the restricted power budgets of lowcost optical transceivers due to the very low loss characteristics of the Directlight® technology.

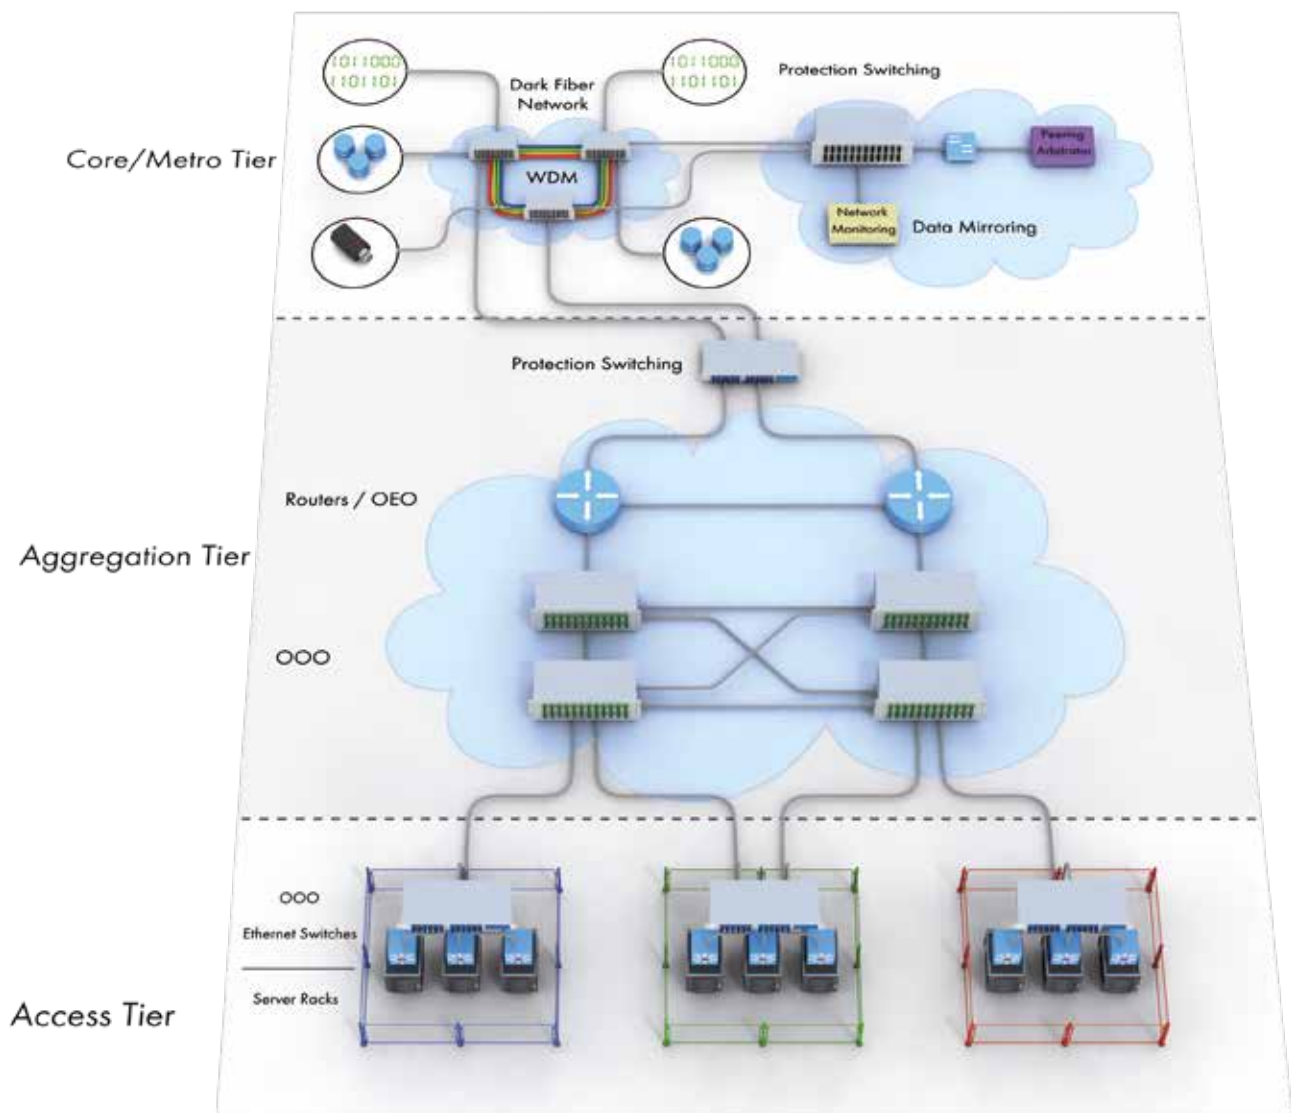

SDN-ENABLED All-Optical Switching

Today's Three-Tiered Network Architectures

SDN-enabled all-optical switching is being introduced at a number of levels to optimize network resources in today's network services, alongside existing packet routers and switches. In the application outlined below, all-optical switching is not a replacement for packet switching; it is added to the existing network to bring the capacity, flexibility and scalability needed at key congestion points to meet heavy and persistent traffic demands.

Large networks have clusters of tens of thousands of servers distributed across rooms, buildings and campuses. To provide reliable and scalable interconnections between all of these servers, networks are typically built in tiers using a combination of packet routers and circuit switches at the core/metro, aggregation and access levels. This hierarchy enables efficient sharing of data and provides services across internal networks while also connecting to the outside. All-optical switching can be added to each tier of the network to enhance performance and reduce costs. Graphic 1 shows the basic tiered approach including potential locations for all-optical switching in each tier.

The Potential of All-Optical Switching

Graphic 1

Technology

- DirectLight® free-space optical switch technology connects fibers with the best possible optical performance
- Patented 2D piezo beam-steering with integrated position control
- Lowest loss all-optical cross-connect – typical 1 dB IL
- Modular platform scales from 4×4 thru 384×384
- Available in dual-sided symmet e-sided (M-fiber) variants
- True transparent dark-fiber switch connections are independent of protocol, bitrate, light color, direction or power level
- Optical power monitoring enables Variable Optical Attenuation (VOA) and Automatic Protection Switching (APS) functionality

Products

Series	Matrix size	Technology	Optional functions	Key features
3000	4×4 to 16×16	DirectLight™ multimode		World's only multimode fiber matrix switch Supports OM1 and OM3/OM4 fibers Available in N×N, M×N configurations
6000	4×4 to 192×192	DirectLight™ single mode	OPM APS VOA	Low insertion loss / superior optical specs Carrier class interfaces (SNMP, TL1, etc.) Available in N×N and M×N configurations Single sided N-fiber variants available SDN enabled with OpenFlow and NETCONF
6000 PSS	4, 8 or 16 Rx/Tx line pairs protection services	DirectLight™ single mode		Compact 1+1 optical layer protection Up to 16 services in 1U, < 25 watts Pre-configured, drop in APS system Automatic LOS protection and restoration
7000	208×208 to 384×384	DirectLight™ single mode	OPM APS VOA	Superior optical specs N×N and M×N configurations SDN enabled carrier-class interfaces Low power, resilient architecture

OPM – optical power monitor
APS – automatic protection switching
VOA – variable optical attenuation

We will need to add this section once you're back from your vacation Michele.

HEMP and lightning protection

Four decades of experience in developing and manufacturing coaxial- and data line-HEMP and LEMP protectors are the foundation of our current EMP protector portfolio and have made HUBER+SUHNER a first stop for protection solutions in defense applications. HUBER+SUHNER offers protection components for land- based, airborne and naval tactical communications as well as for navigation, radar and electronic warfare applications.

Our products are designed to meet the stringent requirements of the defense and security markets. An extensive high-voltage impulse laboratory is available to verify our designs in accordance with the valid lightning, surge and HEMP standards.

HUBER+SUHNER holds groundbreaking patents in the field of coaxial lightning and HEMP protection, such as the automatically suppressing surge arrester (Semper). Many of our products are referenced by the NATO Maintenance and Supply Agency (NAMSA).

Lightning protection

Classified into following series

- Standard quarter-wave shorted stub protector „series 3400“
- Quarter-wave shorted stub protectors with high-pass filter „series 3407“

- Standard gas discharge tube (GDT) protectors „series 3401 and 3402“
- Gas discharge tube (GDT) protectors with high pass filter „series 3408“

- Self-extinguishing gas capsule protector (GDT) „Semper“

- High power/low PIM gas discharge tube protectors (GDT) „series 3409“

- Hybrid fine protectors „series 3403“

- Miniature and slim line gas discharge tube protectors (GDT) „series 3406“

- High RF power limiter „series 9078“

- Twisted pair data line protectors Cat5 and Cat6 „series 3414“

Lightning protection – product overview

Gas discharge tube protectors with exchangeable GDTs

- „Series 3401/3402“ (standard versions)
- For applications with RF and DC components on the antenna line the standard GDT lightning/EMP protectors feature DC continuity and large bandwidth. Most HUBER+SUHNER GDT protector designs provide excellent performance in the NEMP application as well. For specific applications internally DC-blocked GDT protectors are available.

Self-extinguishing GDT protectors (Semper)

The HUBER+SUHNER Semper design guarantees safe extinguishing of the GDT under high RF power or with additional DC components on the antenna line. By retrofitting standard GDTs with the Semper GDT existing installations can be upgraded. The Semper technology is a true improvement to the standard gas tube technology and increases reliability and lifetime of GDT protectors.

True broadband GDT protectors

- „Series 3406“
- SlimLine GDT protectors feature high return loss in the frequency band between DC and 6 GHz. This design is best suited for point to point and WLAN equipment.

Hybrid/low PIM/high power GDT protectors

- „Series „Series 3409“
- This patented technology features low passive intermodulation at extremely high continuous and peak instantaneous power (up to 25 kW PIP).

Bias-T/DC injectors with integrated lightning protector

- „Series 3410“
- Bias-T's, used to „feed-in“ or „pick-off“ DC voltage into or from antenna feeder cables, provide the operating voltage for active electronics installed on the mast (mast head amplifiers, etc.)

Hybrid GDT fine protectors

- „Series 3403“
- For very sensitive DC powered receivers such as those used in GPS installations, the hybrid GDT fine protectors with integrated transient voltage suppressor diodes guarantee lowest residual pulse energy. HUBER+SUHNER fine protectors feature DC continuity.

Lightning protection – product overview

Quarter-wave shorting stub protectors

- „Series 3400“
- HUBER+SÜHNER quarter-wave shorting stub protectors perform best lightning parameters with excellent RF specifications within limited bandwidth. A ratio of 4:1 between lowest and highest frequency of the frequency band is achievable by still meeting high return loss. For specific applications internally DC-blocked quarter-wave shorting stub protectors are also available.

Filter protectors

- „Series 3407“
- LC or LCL band pass filter technologies allow an increase in bandwidth to ratios larger than 4:1 in a compact mechanical design, hence they are an alternative to quarter-wave shorting stub protectors. LC or LCL filter protectors are internally DC-blocked.

Data line protectors

- „Series 3414“ (twisted pair, ethernet)
- Our CAT 5 and CAT6 (Gigabit)data line protectors are „Power Over Ethernet“ compatible and available as IP68 rated robust components for outdoor applications (i.e. backhaul microwave links) or in IP20 specified housings for indoor installations (i.e. data processing centers).

Semper – self-extinguishing gas discharge tube protector

The patented Semper™ concept enhances the safety and reliability of the well-known gas discharge tube (GDT) protector principle impressively. It eliminates the risk of gas discharge tube "hold on" due to DC line powering or high RF signals which will render the system inoperable and can destroy the GDT. The Semper™ invention is based on a mechanical resettable thermo-switch which is integrated within the GDT protectors capsule holder.

Gas discharge tube (GDT) protectors

This technology features bandwidths from DC – 6 GHz and can handle surge currents up to 30kA. GDT technology allows DC voltage on the center conductor. By selecting the correct GDT these products can be used in applications with transmit power up to 1 kW CW. For applications with higher power please consult the factory. A special version of this technology is represented by the self-extinguishing GDT protector (Semper). GDT technology provides reliable protection against natural and man-made surges.

Hybrid GDT fine protectors

For sensitive DC powered electronics such as GPS receivers the Hybrid GDT fine protector with integrated suppressor diodes guarantees lowest residual pulse energy.

High power limiter

Limiters are multi-stage hybrid components which reduce harmful RF power at its input to a defined power level at the output. The special feature of the presented high power limiter is that it is not only limiting but at the same time it is capable of protecting against lightning- and NEMP pulses.

Gas discharge tube (GDT) protectors

This technology features bandwidths from DC – 6 GHz and can handle surge currents up to 30kA. GDT technology allows DC voltage on the center conductor. By selecting the correct GDT these products can be used in applications with transmit power up to 1 kW CW. For applications with higher power please consult the factory. A special version of this technology is represented by the self-extinguishing GDT protector (Semper). GDT technology provides reliable protection against natural and man-made surges.

Quarter wave shorting stub and LC-filter protectors

$\lambda/4$ shorting stub technology can handle extremely high surge currents and features very low residual energy. No DC voltage is allowed on the center pin. Bandwidths with a ratio of 4:1 can be realized. Depending on the selected interface they can be used in applications up to 5 kW CW.
